01 Test Environment

FIELD	VALUE
App name	Rasta's Peri Q
Android package	`za.co.rastasperiq.ordering`
App version	1.0.2 (version code 3)
Device	Sharp AQUOS R7 (A202SH)
Android version	14 (SDK 34)
Screen resolution	1260 × 2730

- Tested by: Our QA team

02 App Overview

Rasta's Peri Q is a chesanyama and flame-grill ordering app. Shoppers browse combo plates and wors or pork meals, pick a spice level, add a kitchen note, and check out for pickup or home delivery. A signed-in account keeps saved addresses, completed tickets with Reorder, and a Privacy & Help hub. The same app also holds an owner dashboard for store hours, Today's Special, and incoming orders.

03 Product Perspective

The menu is easy to scan: meal cards show real photos, prices, and an Available mark, and checkout already offers pickup, home delivery, cash, and EFT. Guest browse works, Reorder puts past items back in the cart, and the owner hours tools look ready for day-to-day store control. Two problems stand in the way of a wider release. Sign Out still leaves the last saved street address on a guest session, and the floating cart badge on Home covers prices and the plus buttons on Featured Meals.

04 Test Coverage

- Welcome, Sign In, Create Account, and Forgot password, including empty and invalid email or password checks
- Home: Today's Special, category chips, Featured Meals, and the floating cart
- Menu: search (including a nonsense query), meal detail, spice and notes, add to cart
- Cart line items and Checkout for pickup vs Home Delivery, including empty name and empty address checks (we did not place a live paid order)
- Orders: completed tickets and Reorder
- Profile, Saved Addresses, Privacy & Help, and Payment Preferences
- Owner Dashboard and App Settings (accepting orders, hours, Today's Special)
- Guest session via Continue as Guest
- Home turned sideways

05 Standard Checks

- **App icon:** The launcher uses a round flame badge with RASTA PERI Q on it, the same mark used inside the app.
- **Theme:** Profile and App Settings have no dark, light, or follow-system switch. Every screen we used stays on the light cream look. See S-02.
- **Status bar:** Home, Menu, and Profile keep titles and the Open Now chip below the status icons, with readable contrast.
- **Logout:** Sign Out on Profile returns to Welcome straight away, with no confirm step. See S-03. The leftover address on the following guest session is C-01.
- **Bottom navigation / gesture safe area:** The Home cart badge sits on Featured Meal prices and plus buttons. On Add Address, Save Address sits in the system navigation strip. See M-02 and M-04.
- **Splash screen:** A clean launch shows the RASTA'S / PERI Q / CHESANYAMA mark with "Authentically Grilled. Delivered Hot." before Welcome.
- **Password visibility:** Sign In, Create Account, and the password reset sheet have no show or hide control on the password boxes. See S-01.

06 Critical / Core-Feature Issues

C-01 Guest session still shows the last signed-in account's saved delivery address

Impact: On a shared phone, the next person who taps Continue as Guest can read the previous customer's street address and delivery notes.

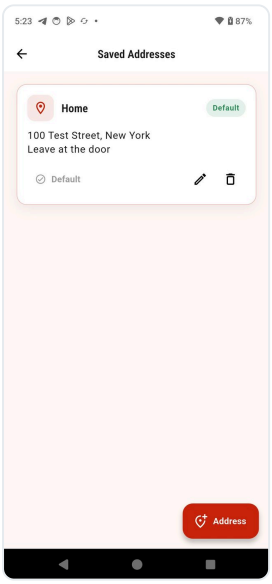

Steps to Reproduce:

1. Open Rasta's Peri Q and sign in.
2. Open **Profile**, then **Saved Addresses**, and save an address (for example a Home label with a street line and a delivery note).
3. Go back to **Profile** and tap **Sign Out**.
4. On Welcome, tap **Continue as Guest**.
5. Open **Profile**, then **Saved Addresses**.

Expected: Sign Out hides or clears that account's saved addresses so a guest session starts empty.

Actual: Guest Profile already says "1 saved • Home default" under **Guest Customer**. **Saved Addresses** still lists the full street line and the delivery note from the signed-in session. Guest **Orders** correctly shows no past tickets, so this is leftover address data, not a still-signed-in account.

07 Minor Issues

M-01 Create Account does not flag an empty Confirm Password

Impact: Someone finishing signup can miss Confirm Password and only find out after they have already fixed the other fields.

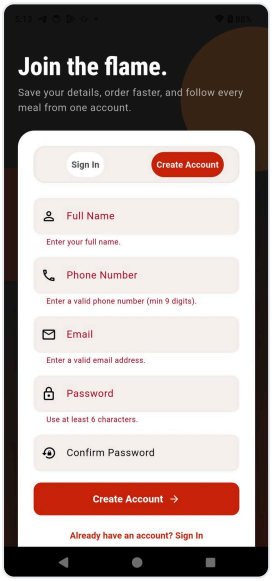

Steps to Reproduce:

1. Open Rasta's Peri Q.
2. Tap **Create Account**.
3. Leave **Full Name**, **Phone Number**, **Email**, **Password**, and **Confirm Password** empty.
4. Tap the red **Create Account** button.

Expected: Every required field, including Confirm Password, shows a clear error.

Actual: Full Name, **Phone Number**, **Email**, and **Password** show red helper text ("Enter your full name.", "Enter a valid phone number (min 9 digits).", "Enter a valid email address.", "Use at least 6 characters."). **Confirm Password** stays blank with no message, even though mismatched values later produce "Passwords do not match."

Verified: ✓

M-02 Home cart button covers Featured Meal prices and add controls

Impact: Shoppers cannot read the price or reach the plus button on the meals sitting behind the cart badge.

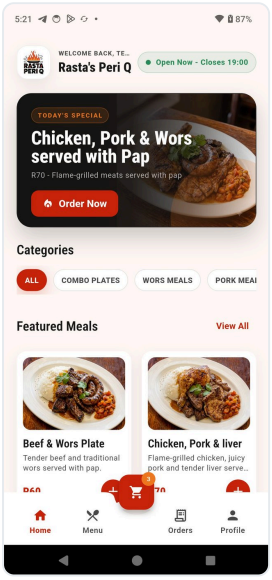

Steps to Reproduce:

1. Open Rasta's Peri Q and sign in or continue as guest.
2. Stay on **Home** and look at **Featured Meals** above the bottom tabs.

Expected: Prices and add buttons sit fully above the cart badge and the tab bar.

Actual: The red cart badge sits on top of the Beef & Wors Plate price so R60 reads as D60, and it also covers the plus buttons on both featured cards.

Screenshot:

M-02

Verified: ✓

M-03 Home Delivery keeps Cash on Collection selected

Impact: A delivery order can be placed with a pay-in-store method, so the rider and the kitchen disagree about how the customer will pay.

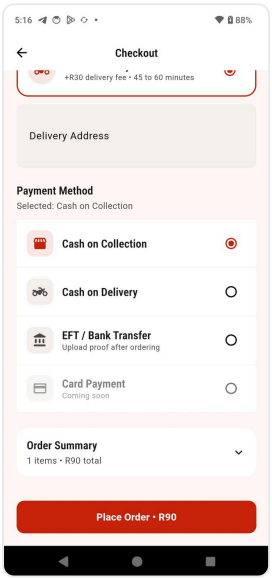

Steps to Reproduce:

1. Open Rasta's Peri Q, add a meal to the cart, and tap **Proceed to Checkout**.
2. Under **Order Type**, tap **Home Delivery**.
3. Scroll to **Payment Method**.

Expected: Choosing Home Delivery selects Cash on Delivery, or at least clears Cash on Collection.

Actual: The screen still says "Selected: Cash on Collection" and that radio stays on, while **Cash on Delivery** sits unchecked next to it. The total does update to include the R30 delivery fee (R90 on a R60 plate).

Screenshot:

M-03

Verified: ✓

M-04 Save Address sits in the system navigation bar

Impact: People adding a delivery address can miss the save button or hit the system bar instead.

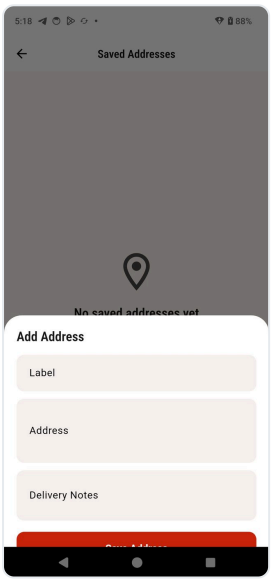

Steps to Reproduce:

1. Open Rasta's Peri Q, then open **Profile** and **Saved Addresses**.
2. Tap **Add Address**.
3. Look at the bottom of the sheet.

Expected: The full **Save Address** button sits above the system navigation area.

Actual: Only a thin red strip remains. The words **Save Address** are cut off by the system bar. Submitting the empty sheet also shows no field errors.

Screenshot:

M-04

Verified: ✓

M-06 Home in landscape hides the menu under the tab bar

Impact: Turning the phone sideways leaves only the special banner. Featured meals and categories are gone, so ordering from the couch or a car mount is blocked.

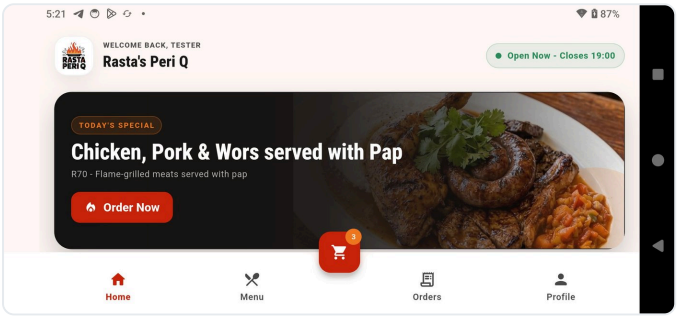

Steps to Reproduce:

1. Open Rasta's Peri Q to **Home** in portrait.
2. Rotate the phone to landscape.

Expected: Home still shows Today's Special, categories, and Featured Meals, with the tab bar clear of content.

Actual: The special card fills the short space. Categories and Featured Meals are off screen. The cart badge sits on the special photo, and the tab bar takes the rest of the height.

08 Suggestions

S-01 Show and hide on password fields

On **Sign In** and **Create Account**, add a show/hide control on **Password** and **Confirm Password** so people can check what they typed before they tap Sign In or Create Account.

S-02 Dark or system theme

On **Profile** or **App Settings**, add a dark, light, or follow-system theme. This is an app people open at dinner time, and every screen we used is locked to the light cream look.

S-03 Confirm before Sign Out

On **Profile**, ask for confirmation before **Sign Out**. A slip on that red label drops the shopper back to Welcome, and they have to sign in again to see their orders.

S-04 Open a past ticket from My Orders

On **My Orders**, let a tap on a past ticket open the full order: items, spice, notes, fulfilment, and payment. Right now only **Reorder** does anything, and completed rows still draw a full red progress bar.

S-05 Drop the backend name from customer screens

On Welcome and guest **Profile**, drop the customer-facing "Secure sign-in powered by Supabase" line and the guest note about admin tools unlocking for Supabase users. Shoppers do not need the backend name on those screens.

09 Summary

Ordering a flame-grilled plate through Rasta's Peri Q is straightforward once you are in: we picked a spice, added a kitchen note, and the cart and reorder path behaved as we expected. Guest browse, Privacy & Help, and the owner hours tools also worked, and empty login, signup, and checkout fields were rejected with clear copy, aside from Confirm Password. What we could not trust is Sign Out, because a guest session still showed the last saved street address, and Home hides prices under the cart badge. The build is good enough to keep using for closed kitchen trials, but the leftover address after sign-out and the Home cart overlap should be fixed before more customers are invited in.

10 About this report

This report was prepared by PrimeTestLab from testing performed on the device, build and testing window recorded in this document. Verdicts and severity ratings describe the behavior observed during that testing session.

If you have a question about any finding in this document, open the report in your PrimeTestLab dashboard and send a reply. Our team follows up on the same page.

This document was prepared for the client named on the cover. It may describe an unreleased build of your application, so please treat its contents as confidential.
